## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-23 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-21 of U.S. Patent No. 6,352,531. Although the conflicting claims are not identical, they are not patentably distinct from each other because the

Art Unit: 3739

claims of both the present application and the U.S. Patent are directed to analogous variable stiffness catheter for use in interventional vascular therapy, the catheter comprising: a catheter shaft having a proximal end and a distal end; a reinforced tube attached to catheter shaft, the reinforcing tube having a plurality of apertures including lateral slits, axial slits, and helical slits.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

4. Claims 1-23 are rejected under 35 U.S.C. 102(e) as being anticipated by O'Connor et al. U.S. Pat. No. 6,352,531 B1.

O'Connor et al. disclose variable stiffness catheter for use in interventional vascular therapy, the catheter comprising: a catheter shaft having a proximal end and a distal end; a reinforced tube attached to catheter shaft, the reinforcing tube having a plurality of apertures including lateral slits, axial slits, and helical slits (see claims 1-21).
